DOCK SEALS

MODEL 20

*For standard openings
8' W x 8'H*

Model 20 Dock Seal provides a positive seal at loading dock openings. The vehicle positioned at the dock compresses the foam pads, eliminating the gap between the building and the vehicle body.

MODEL 40

For large dock openings.

The Model 40 Rigid Truck Shelter is designed for a wide range of truck and building variations. Flexible stays keep the head and side curtains pressed against the truck body. Front curtains are mounted on a 2 x 4 wood frame.

MODEL 60

Soft Sided Shelter

The Model 60 Soft Sided Shelter offers the sealing capability of a compression seal with the versatility of a truck shelter. It eliminates the need for steel bumper guards as well as any pressure.

MODEL 80

For high dock openings

The Model 80 Dock Seal, with a head curtain in lieu of a head pad, functions the same as the Model 20.

BUMPERS

RUBBER DOCK BUMPERS

Available in a variety of sizes and designs to fit any facility. Easy to install. Recommended with all Dock Seals.

HOODS

METAL HOODS

Protection against rain and snow. Custom made to fit any size opening. Easy to install.
